# Stellar touchdown

- Start page
  "press key to start"
  Blurred background?
- Use arrow key to thrust the ship for a softer landing
- To fast of a landing result in a fail
- when successfully landing the ship "press key to restart"

The concept is simple. By pressing the arrow key you will give the ship a thrust which will make the ship slow down making a safe descend to the ground. You will not be able to maneuver the ship to the sides.
